

# Pacing Options

When you select *Auto* as the delivery method on the booking screen, the **Pacing Options** option will appear. These options determine how many impressions of the booking will be delivered during the first half of the delivery period.

## How

Delivery method *	auto
	<input checked="" type="checkbox"/> Auto delivery limits
<u>Pacing options *</u>	even
To reach	1.000.000
Unit *	impressions

There are four pacing options:

## How

Delivery method *	auto
	<input checked="" type="checkbox"/> Auto delivery limits
Pacing options *	<ul style="list-style-type: none"><li>even</li><li>frontloaded</li><li>as-fast-as-possible</li><li>account-setting</li></ul>
To reach	
Unit *	

## Even

50% of the booked impressions will be delivered in the first half of the delivery period, with the remaining 50% delivered in the second half. Select this option if you would prefer a consistent delivery rate throughout the entire booking period.

## Frontloaded

62,5% of the booked impressions will be delivered in the first half of the delivery period, with the remaining 37,5% in the second half. Choose this option if you would prefer the majority of impressions to be delivered during the first half of the booking period.

## As fast as possible

75% of the total number of booked impressions will be delivered in the first half of the delivery period, with the remaining 25% being delivered in the second half. Select this option if you want the majority of your impressions to be delivered in the first half of the booking period.

The difference between *as-fast-as-possible* and SOV 100% is that the former is still an automated delivery method that takes the delivery period and competing bookings into account, whereas SOV 100% does not (which can cause delivery problems for competing bookings).

## Account setting

*account-setting* is only relevant for existing accounts that have both the *deliveryDistributionParameter* in their configuration file and the Classic UI. If you are unsure whether your account has the required setup, please [contact support](#).

*Account-setting* uses the *deliveryDistributionParameter* from the configuration file of your Adhese instance, which can be set to any value between 50% and 75% for the first half of the delivery period.
