

SDK implementations

Implementations that run on the Adhese SDK have 2 extra options for debugging.

URL parameter

By adding "?adhese_**debug**=true" to the URL of the page you can tell the SDK to print Adhese related messages in the browser console.

Devtools

The SDK contains a devtools panel that can be used to show placement & banner data. These tools are however not enabled by default. To enable it please take a look at

<https://adheses.github.io/sdk/typescript/plugins/devtools.html>.
